

Internship Opportunity for Outstanding Students

Students Get Paid to Make a Difference!

Training starts June 26 - July 31, 2017

Students work in an actual position, learning real-world professional skills in an energy management internship for school credit.

In-depth training prepares students in technical and professional skills while they get paid to help other businesses monitor energy use and encourage conservation. This is a terrific opportunity to experience soft-skill learning that is typically not available in a traditional classroom setting. And it's a great booster for college applications and resumes!

Students will learn:

- Advanced, user-friendly software for energy management
- How to read energy data and generate reports
- How to use reports to make recommendations to onsite facility managers
- How to conduct a high-impact online professional webinar
- How to manage professional projects
- How to make professional presentations

Students will gain:

- Real-world knowledge of the energy management industry
- Insight into how a facility consumes energy
- Conservation knowledge that applies to all aspects of your life
- Professional communication skills
- Organizational and time management skills
- Valuable experience to boost your resume or college application

“This unique internship goes beyond being an excellent addition to one’s college resume. It enables students to avoid menial tasks associated with other internships open to high school students and instead is an actual workplace where students contribute just as much as other employees.”

-**Nishi**, AEM Intern, 2017

“AEM is a great opportunity for getting community service hours while also making a real impact by saving energy on a large scale. It’s also a great opportunity to gain real world experience by having a real paying job. I get treated like an employee with real responsibilities. It’s fantastic to get involved in an area that is so interesting—saving energy by changing behavior—while helping the community.”

-**Pranay**, AEM Intern 2016

“As an AEM intern I can instantly see the work I am doing make a difference. This practical energy management program puts technology and communication together, and it really works!”

-**Roger**, AEM Intern 2016

I loved working with energy data analysis and meeting with so many professionals. I have improved my presentation skills by learning about the audience before I talk and learning how to keep them engaged with the subject.

-**Joanne**, AEM Intern 2017
